

Modular PegBoard

Installation Instructions

Included:

Pegboard
4 Wall Plugs
4 Spacers

You will require:

Drill
Pencil
Spirit Level
Vacuum Cleaner (optional)

1. Get someone to hold the pegboard where you want to install it. Place a spirit level on top to ensure that it is level. Once level, make a mark on the wall through the centre of the round holes in each corner of the pegboard.
2. Drill holes that are the correct depth of the wall plugs into the wall where the marks are. Insert the wall plugs.
3. Then insert a screw from the wall plug through a corner hole of the pegboard, then through the spacer and then fit it into the wall plug. Partially tighten the screw to allow for accuracy and adjustments during the installation process.
4. Complete this step (step 3) for the remaining three corner holes of the pegboard.
5. Once one board is installed, place the next board flush against the installed board and repeat the levelling process and marking of the holes ensuring that the boards will sit flush and level. Repeat steps 2 – 4.

Note: Boards can be installed vertically or horizontally and accessories will still be functional across boards. However many boards you wish to install they must all hang vertically or all hang horizontally and the “+” holes must be aligned to allow for the use of accessories across boards.

Painting:

Recommended spray-paint brands that work best on the MDF: Pro Art or Marshal Spray Paint.

Spray a small piece of MDF such as a pegboard accessory to test the paint and ensure that it does not wipe off but at the same time allows for a smooth finish to allow accessories to slide easily in and out of pegboard slots.

A few thin coats, that have dried in between spraying times, works better than one thick coat.
